Central Lincoln PUD in Production with Telvent Miner & Miner's Designer

Fort Collins, Colorado – Central Lincoln PUD (CLPUD) is in production with Telvent Miner & Miner's Designer solution. Serving 37,000 electric customers in the central Oregon area, CLPUD continues to expand their use of GIS with the ArcFM™ Solution which now includes Designer, a GIS-based graphic design solution. CLPUD currently have 31 seats of ArcFM to support basic mapping and 14 seats of Designer to support their design process.

CLPUD implemented Designer to take advantage of more modern technology and leverage their investment in ArcFM. An interface between Designer and the PUD's site inventory, work order and customer information systems has streamlined their design process and improved information integrity. CLPUD is also able to configure the user interface and provide engineers easy-to-use tools that support their workflow. The utility also benefits from improved efficiencies including removal of multiple data entry and standardization of the design process.

Neal Myers, GIS Supervisor at Central Lincoln PUD, says "Central Lincoln's goal with this project was to upgrade our existing design application with Designer. It was important that any disruption to other business process integrations and automation tools be minimal. By using ArcObjects and Designer interfaces to implement the integrations, we were able to meet this goal."

Telvent Miner & Miner (TM&M) is a world leader in the development and implementation of GIS software for utilities. TM&M's ArcFM Solution and its extended services assist electric, gas, water, and wastewater utilities in increasing

productivity, lowering costs, and improving services by allowing them to effectively manage spatial information. Founded in 1946 as a full-service electrical engineering firm, TM&M has been a business partner of ESRI since 1987. This partnership has enabled TM&M to become the world's leading developer of ArcGIS applications for the utility industry. TM&M services include implementation and customization of software to fit the needs of individual utilities. For more information, please visit www.telvent.com/miner

*For more than 30 years, **ESRI** has been the leading developer of GIS software with more than 300,000 clients worldwide. ESRI also provides consulting, implementation, and technical support services. In addition to its headquarters in California, ESRI has regional offices throughout the United States, international distributors in more than 90 countries, and more than 1,700 business partners. ESRI's goal is to provide users with comprehensive tools to help them quickly and efficiently manage and use geographic information to make a real difference in the world around them. ESRI can be found on the Web at www.esri.com.*

***Telvent** (Nasdaq: TLVT), the IT company for a sustainable and secure world, specializes in high value-added products, services and integrated solutions for the Energy, Transportation, Environment and Public Administration industry segments, as well as Global IT Services. Its innovative technology and client-proven expertise enable the efficient and secure real-time management of operational and business processes for industry-leading companies worldwide.
